TECHNICAL DATA SHEET

Max LinerTube™ VE

Polyester Felt Tube

DESCRIPTION

Max LinerTube™ VE is a non-woven, needle-punched polyester fiber felt with a PU coating that is compatible with most Vinyl Ester and Polyester resins. Tube forming and seam bonding are achieved through a specially designed overlocking chain stitched sewn process — creating a superior, high-performance impermeable liner designed for sweeping bends with very minimal stretch.

TECHNICAL DATA

- **Coating:** PU
- **Carrying Material:** Polyester Felt
- **Seam:** Stitched or Thermal Welded with an extruded tape seam
- **Installation:** Inversion
- **Recommended Curing Temperature:** Ambient, heat or LED light cure
- **Resin Compatibility:** Specifically designed for MaxPox VE. Use with MaxPox®, VertiPox® Epoxy Resin Systems, MaxLight® UV LED Resin Systems, or approved equal

APPLICATIONS

- Open-End (Blindshot) with Calibration Tube
- Closed-End
- Ideal for straight piping applications with minimal stretch.
- May be used on sweeping bends up to 45° with slight wrinkling.
- Manufactured transitional liners and custom sizes are available.

THICKNESS RANGE

- 3mm and 4.5mm

AVAILABLE MANUFACTURER LENGTHS

- 164′ and 328′ stock lengths (+/-)
- Custom longer lengths available

DIAMETER RANGE

- 3″ and larger

INSTALLATION

Refer to Field Installation Sheet for resin calculations.

- **Vacuum:** -0.5 bar.
- **Calibration Roller recommended gap setting:** Thickness of liner x 2 + 2mm
- **Installation air pressure:** 7 to 10 psi (may need additional pressure to invert around bends).
- **Curing pressure:** 6 to 8 psi
- **Heat curing:** 120 – 185°F | 48.9 – 85°C without CalTube, must use CalTube when steam curing.

Vacuum level shall meet or slightly exceed inversion and curing Pressure. Always use a vacuum with proper vacuum gauge and regulator. Always use a guide tube to contain unsupported liners from radial expansion.

MAXLINER®

STORAGE/HANDLING

Avoid Extremes of Temperature
- Freezing may cause the coating structure to degrade locally, especially areas where the coating is in tension or compression — at bends and edges, and immediately adjacent to seam welds.
- Recommended storage temperature 40°F – 95°F | 4°C – 35°C.
- Shelf life at this temperature: in excess of 1 year.

Avoid Extremes of Humidity
- Very high relative humidity (especially at high temperatures such as tropical countries) will accelerate the degradation, consequently reducing the shelf life.
- Recommended storage humidity 25% rh – 65% rh.
- Shelf life at 65%, 95°F | 35°C: in excess of 1 year.

Avoid Prolonged Wet Storage
- As with high humidity, the coating is more susceptible to degradation at higher temperatures, and even further susceptible if pH of liquid in contact is significantly above or below 45°F | 7°C. Wet storage is not recommended.

Avoid Direct Sunlight
- Prolonged exposure to the sun's ultraviolet light will accelerate the degradation of the coating. Store away from direct sunlight, preferably in dark conditions.

MECHANICAL DAMAGE SHOULD BE AVOIDED
- Ensure that liner is not placed directly onto grit or gravel floor — sweep and cover floor first.
- Ensure personnel are instructed not to walk on or smoke around the liner.
- Handle with care and ensure safe transport at all times.
- Ensure any rollers are clean, and the liner is not in contact with any sharp edges or snags anywhere during use.

CHEMICAL ATTACK
Avoid prolonged contact with solvents and chemicals.
